Electric Oven

Built-in Ovens

Built-in Microwave ovens

We introduce only the Best

Ovens

Oven lighting
The light inside the oven is switched on, for example, when cleaning the oven chamber.

Defrost
This makes the frozen food thawing by circulation wind of ambient temperature, keeping food in its original way.

Bottom element on
The oven is operated by using only the bottom heater, e.g. use for final baking from the bottom.

Top element on
The oven is operated by using only the top heater, e.g. use for final baking from above.

Bottom and top heaters on
Setting the control to this position allows the oven to be heated conventionally.

Grill element on
Setting the control to this position allows the dishes to be grilled on the grate.

Fan and combined grill on
The oven activates the combined grill and fan function. In practice, this function allows the grilling process to speed up and an improvement in the taste of the dish.

Fan and grill
The oven activates the grill and fan function.

Rear element with fan
This cooking mode allows homogenous distribution of the heat inside the oven, making it possible to cook several items of food at the same time.

Rotisserie with grill
These symbols allow use of the rotisserie with grill or top heater on.

Gas heat
Setting the control to this position allows the oven to be operated by gas.

Rear and bottom heat with grill
Grill element and bottom element spread heat with fan around the food, keeping the meat golden and tasty in each side.

Rear and bottom element
Balance the heat from rear element and bottom element inside the oven by fan, this function is great for cooking Pizza, cake and cookies.
